

# Content Management Simplified

Neos makes editing fly. It provides an interface so intuitive, that it requires no training and offers power where needed.

**so eas**

## Editor Experience

An editor should get the best support possible when creating and curating content. Neos knows how to speed up your work and shows quick results.

## Multi-Channel Publishing

View and edit information from any perspective: With multiple editing modes and a flexible preview concept, Neos provides an answer to this challenging task.

- Intuitive to use
- Short learning period
- No training required
- Power where needed

## Ready For The Cloud

Your CMS is not an island. So, why not take advantage of the cloud? From scaling to global content distribution, Neos provides an answer to leverage this potential.

## Touch Optimized

Neos loves diversity. Thus the responsive interface is prepared for the requirements of a world of different devices. With Neos you can publish from and to any device.

## Rapid Development

Technical requirements can be matched without a lot of code. Neos offers smart tools ready-to-go for developers, which help to reduce development budgets.

### Content Sync

Content distribution is important in a multi-stage environment. With the possibility of synchronizing information assets between your installations, it has never been easier to be in full control of distributed content.

### Flexible Content

The nature of content in a CMS should be defined by the experts. That's you. In Neos your custom content is a first class citizen and lives in a solid content repository.

### Powerful Framework

Neos was designed to be extremely extensible from the start. If more application logic is required there's no need to learn another technique. Based on TYPO3 Flow, the full power of the most advanced PHP framework is already at your fingertips.

- ✓ Part of the TYPO3 family
- ✓ No licensing fee
- ✓ Strong community
- ✓ Open source

### Deployment Friendly

Launching and maintaining a project is an important part of your process. This is why Neos was made extremely deployment friendly. Along with *Surf* the TYPO3 community provides a high quality tool for zero-downtime deployments.

### Interoperability / API

It should be easy use content in other applications or utilize information from other sources, be it a mobile app or ERP system. No problem: based on strong standards, Neos aims for connectivity and provides a consistent API.
